

# ColorFlex Coffee Meter - Firmware update v 1.50

---

ColorFlex Coffee firmware version 1.50 is released (Sept 2015) with the following changes from the previously released CFEZ Coffee firmware version 1.30:

**Setup 1** configured specifically for Coffee Roast of Ground Coffee with following features. All other setups are CFEZ typical:

**View 1** User configurable display (enable/disable) of SCAA/G Gourmet Coffee Scale

- Optional display of HCCI – Hunter Coffee Color Index
- Optional display of SCAA Roast name classifications
- Optional display and selection of Trade Roast name classifications including User-defined custom names

**View 2** User configurable display (enable/disable) of SCAA/C Commercial Coffee Scale

- Optional display of HCCI – Hunter Coffee Color Index
- Optional display of SCAA Roast name classifications
- Optional display and selection of Trade Roast name classifications including User-defined custom names

**View 3** User configurable display (enable/disable) of HCCI – Hunter Coffee Color Index

- Optional display of  $L^*$ ,  $a^*$ ,  $b^*$  D65/10 color values

Any of the other 5 available views can be configured by the User to report additional color information.

HCCI correlation to 640 nm reflectance to match Dr. Lange has a user-configurable slope ( $m$ ) and offset ( $b$ ) that is User-configurable in Setup 1.

User-defined custom roast names can be defined in Main Menu/Global Options.
