

# How to clean ColorFlex EZ instrument lens cover

---

If you have dropped or spilled any product into the CFEZ the easiest way to clean the instrument is to use some compressed air (for cleaning keyboards and other computer parts) and clean any dust or debris that way. If you need further cleaning I would start with a dry cloth (such as a Kim wipe) and make sure not to apply too much pressure when cleaning the lens cover that would cause the glass to break. If you really needed to you could use a solvent as the piece is glass.
