

# OJ Standards and Citrus Number

---

Question: What are the typical Citrus Numbers associated with OJ standards

Typical Citrus Numbers are as follows

Std Citrus Number

OJ1 46.0

OJ2 40.4

OJ3 38.7

OJ4 37.3

OJ5 36.3

OJ6 33.7

We receive the orange colored standard and assign values using a ratio hitch method to the actual standard. If the batch to batch color of the standard changes then expect the calibrated CN to change. In our experience we are usually within +/- 0.3 of the values listed above for the OJ standards that we supply.
