

Set up Admin/User Accounts and Enable Security on the Vista

Set up Admin/User accounts:

1. Create a administrative group and a user group in Jobs/User Manager/Create/Group

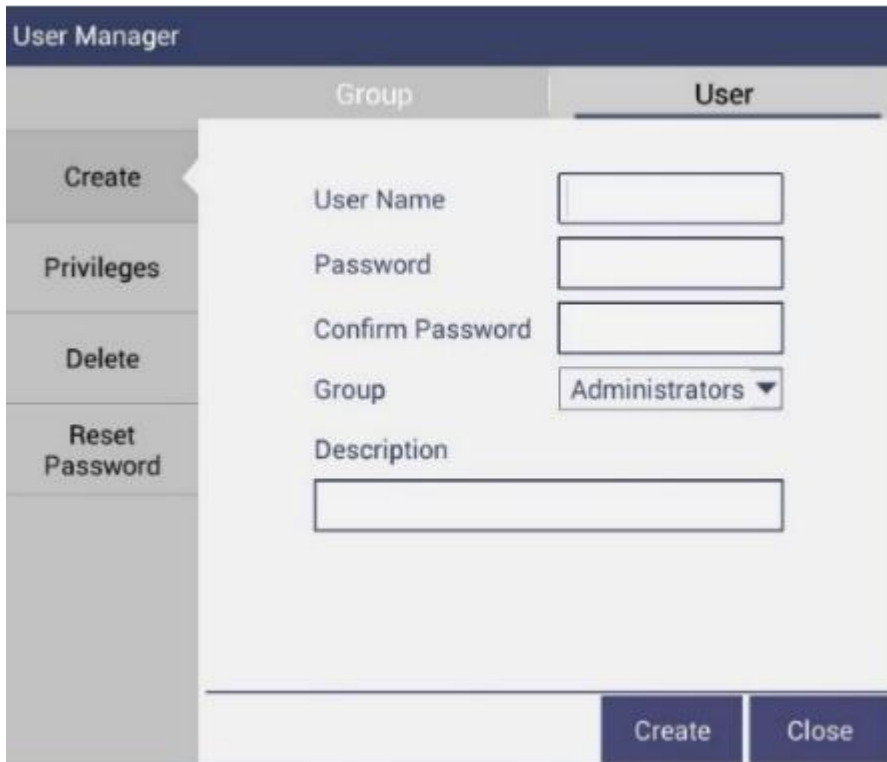

The screenshot shows the 'User Manager' application window with the 'Group' tab selected. The 'Create' button is highlighted in the left sidebar. The main area contains the following fields:

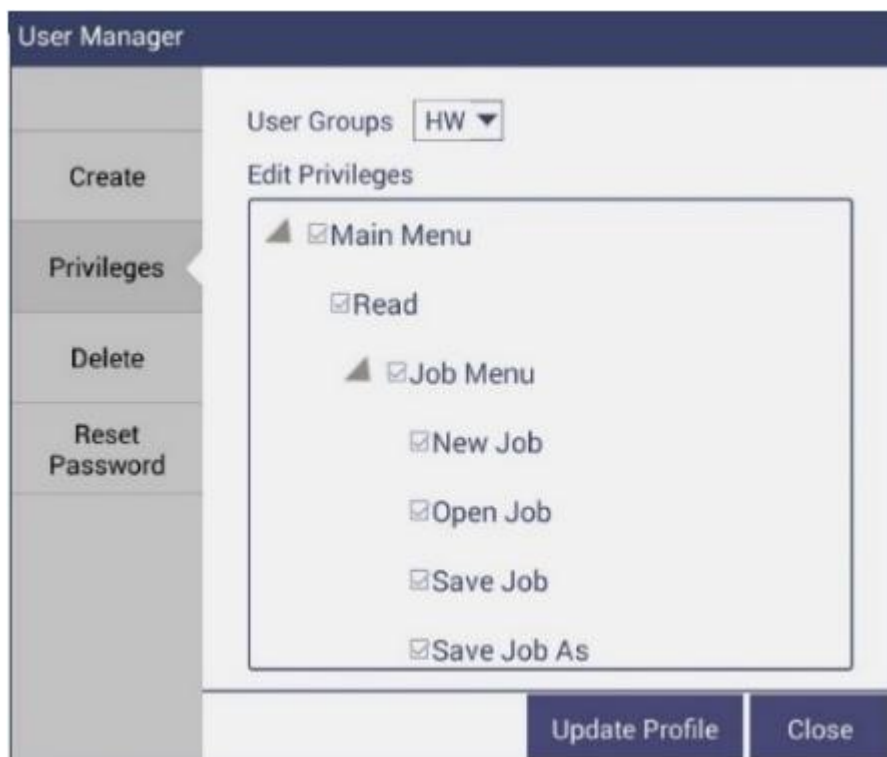

- Group Name:
- Type: Administrative (dropdown menu)
- Description:

At the bottom right, there are 'Create' and 'Close' buttons.

2. Create admin accounts under the administrative group and create user accounts under the user group in Jobs/User Manager/Create/User.

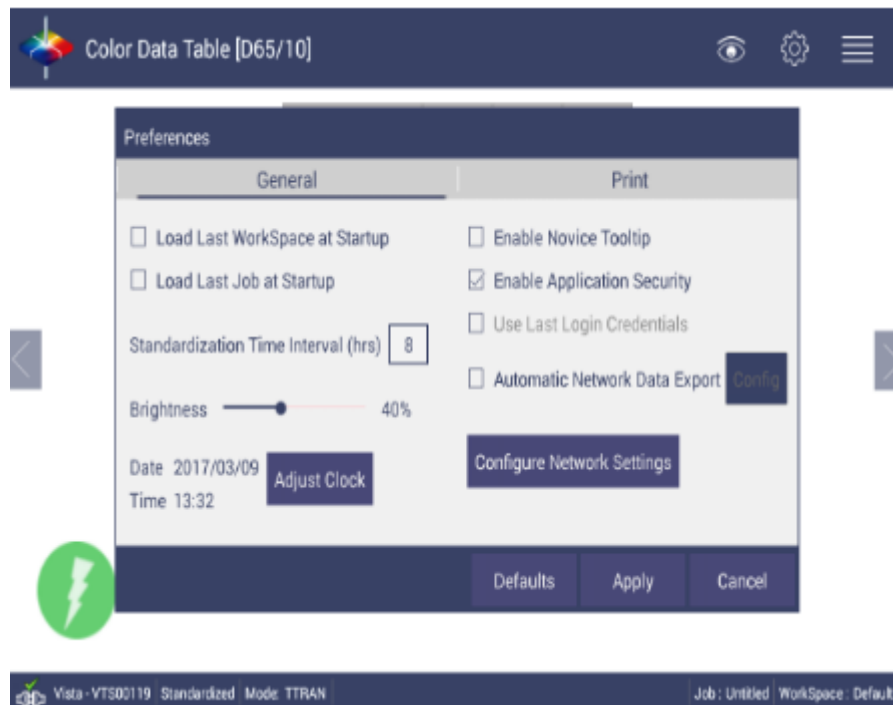

3. Accounts in administrative groups can access to all features in Vista Essentials, and they can assign the access privileges to accounts in user groups as shown below:

4. The administrative user can delete groups/users and reset passwords. When each user logs into the Vista, they must enter a name and password if "Enable Application Security" is checked.

Enable Security:

Security can be enabled on the Vista to ensure that operators cannot modify or delete folders or files and limit functionality. To enable security, go to **Jobs: Preferences: General** and check **Enable Application Security**.

Note: When the user selects the **Enable Application Security**, they must have created admin/user accounts before logging out of Essentials. Otherwise, they will not be able to login Essentials again.

For convenience, the user can check the box under **Jobs: Preferences: General** to use the **Last Login Credentials**. This eliminates the need for a user name and password each time.
