

What is the range of sample dish sizes that can be used with the D25 NC?

The D25 NC ships as standard with two pans:

- One 150 mm (6 in) dish that is 25 mm (1 in) deep and has a hub in the center for rotation of the dish.
- One 300 mm (12 in) dish that is 25 mm (1 in) deep and has a hub in the center for rotation of the dish.

The D25 NC can measure a circular area as small as 1 inch (with turntable turned off) using the optional petri dish holder.
